

**In cooperation with:** BME Faculty of Civil Engineering  
 Department of Construction Materials and Technologies  
 Department of Structural Engineering  
 Department of Structural Mechanics

**In cooperation with:** BME Faculty of Architecture  
 Department of Mechanics, Materials and Structures

**Közlekedéstudomány Egyesület (KTE):**  
 Mérnöki Szerkezetek Szakosztállyal

**Az ülés helye (PLACE):** BME Building K, 1st Floor Room 87 (K187)  
 1111 Budapest, Műegyetem rkp. 3.

**Az ülés kezdete (DATE):** **5 (Monday) February 2024, from 15.00 – 16.30**

### INVITATION - MEGHÍVÓ

Dr. László Csetényi – Dr. Csetényi László

**Sourcing of fly ash and its effect on durability of concrete**  
**Szállópernye forrásai és hatása a beton tartósságára**

**Short summary of presentation:**

Curbing greenhouse gas emissions by retiring coal fired power stations put limitations on the availability of fly ash and turned attention to sourcing from historic storage areas of the material (stockpiles and lagoons). The quality and applicability of such fly ash is variable as physical and chemical changes are noted over time, foremost affecting water requirement and reactivity. There is a range of processing options available to mitigate the effects with beneficial outcomes on the durability of fly ash concrete. A selection of these will be reported alongside testing methods and achievable improvements.

**Az előadás rövid összefoglalása:**

Az üvegházhatású gázok kibocsátása kézenfekvően a széntüzelésű erőművek leállításával jár együtt, de ez korlátozza az építőipar számára a pernye beszerzését. A figyelem a korábban betárolt források felé irányul mint lehetséges helyettesítők. A huzamosabb ideig való tárolás viszont egyértelmű változásokat okoz az anyag egyébként is változó minőségében, fizikai és kémiai hatások egyaránt megfigyelhetők, melyek leginkább a pernye vízigényét és reaktivitását érintik. Ezek a káros hatások különböző feldolgozási lépésekkel orvosolhatóak és javítani lehet velük a beton tartósságát. Az előadás számot ad a lehetséges módszerekről, mérési eljárásokról és az elérhető eredményekről.
